Overview

Product

AL Wireless NMS (Network Management System)

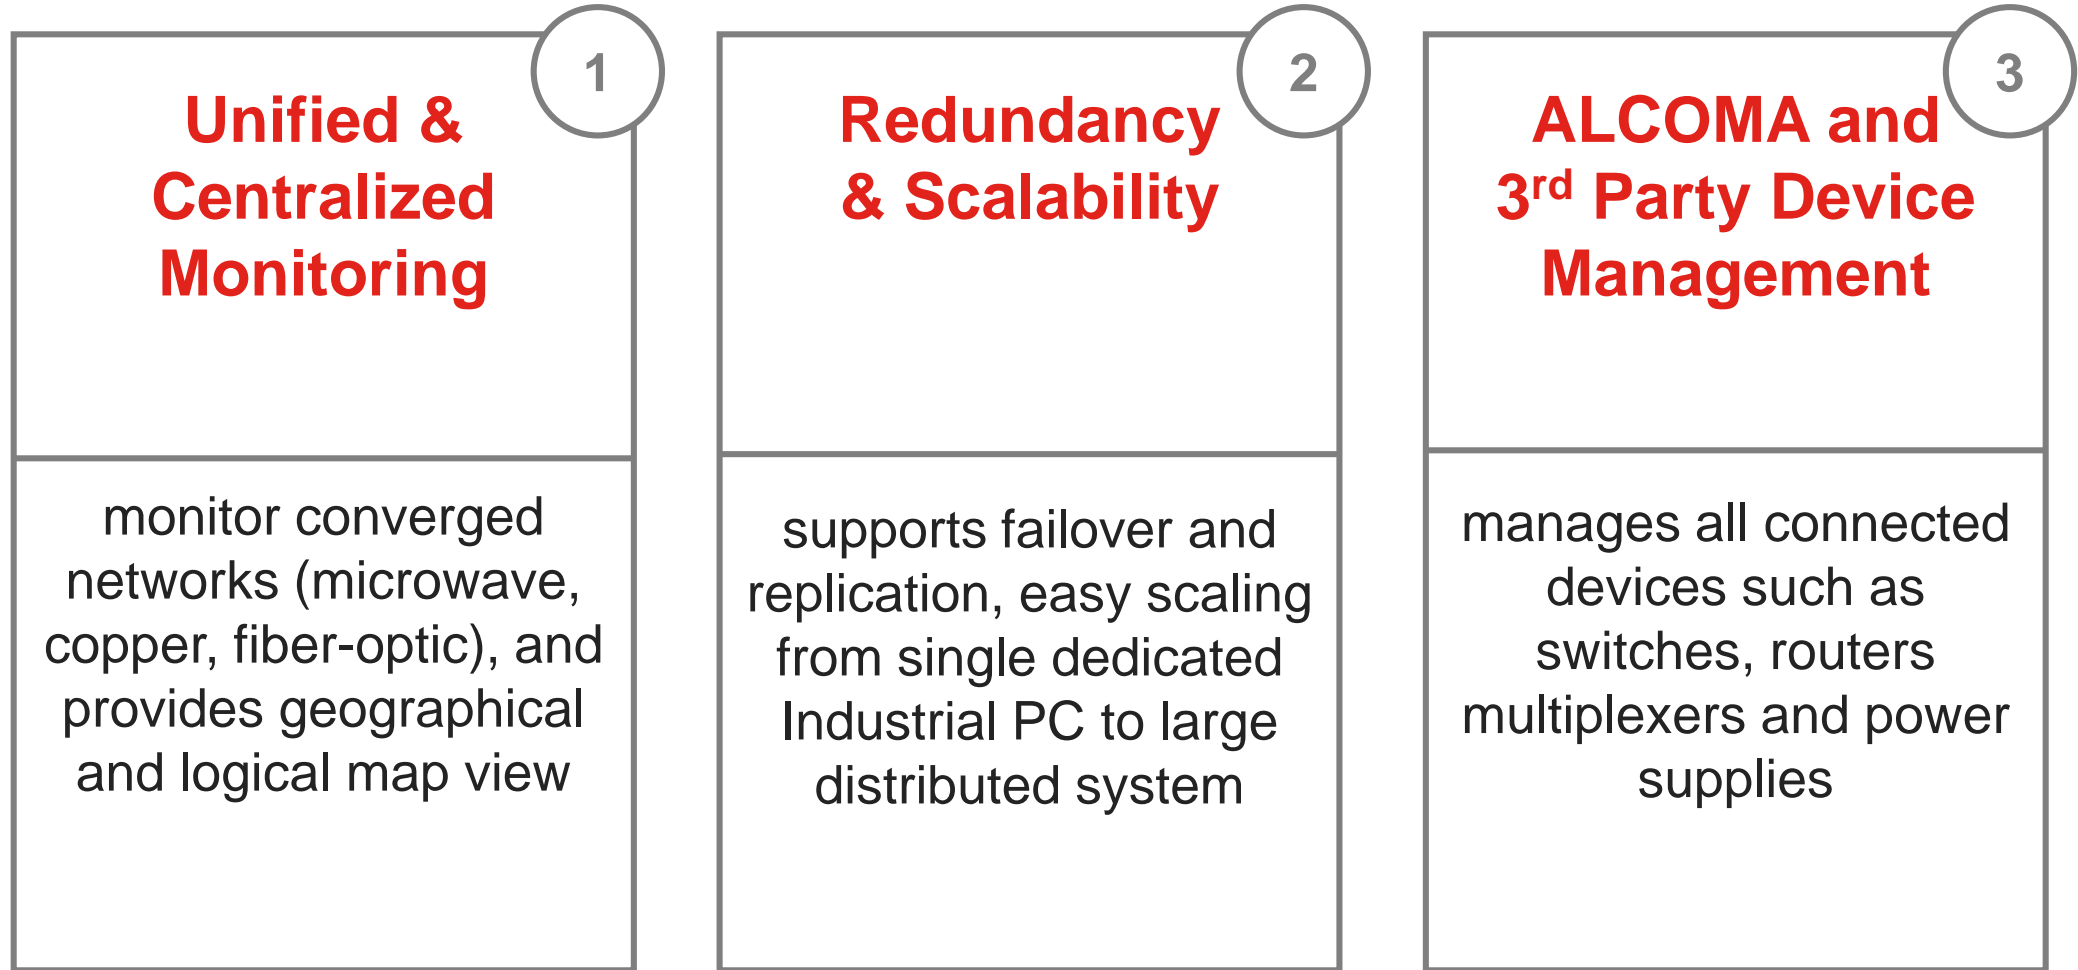

AL Wireless NMS is a new turn-key Network Management System for simply managing radio link networks from a centralized location.

NMS contains Special Industrial PC with dedicated Software developed by AL Wireless.

Clients can manage and monitor large networks comprised of ALCOMA RF links, as well as 3rd party SNMP-based devices in the network (switches, routers, multiplexers, etc.).

AL Wireless NMS (Network Management System)

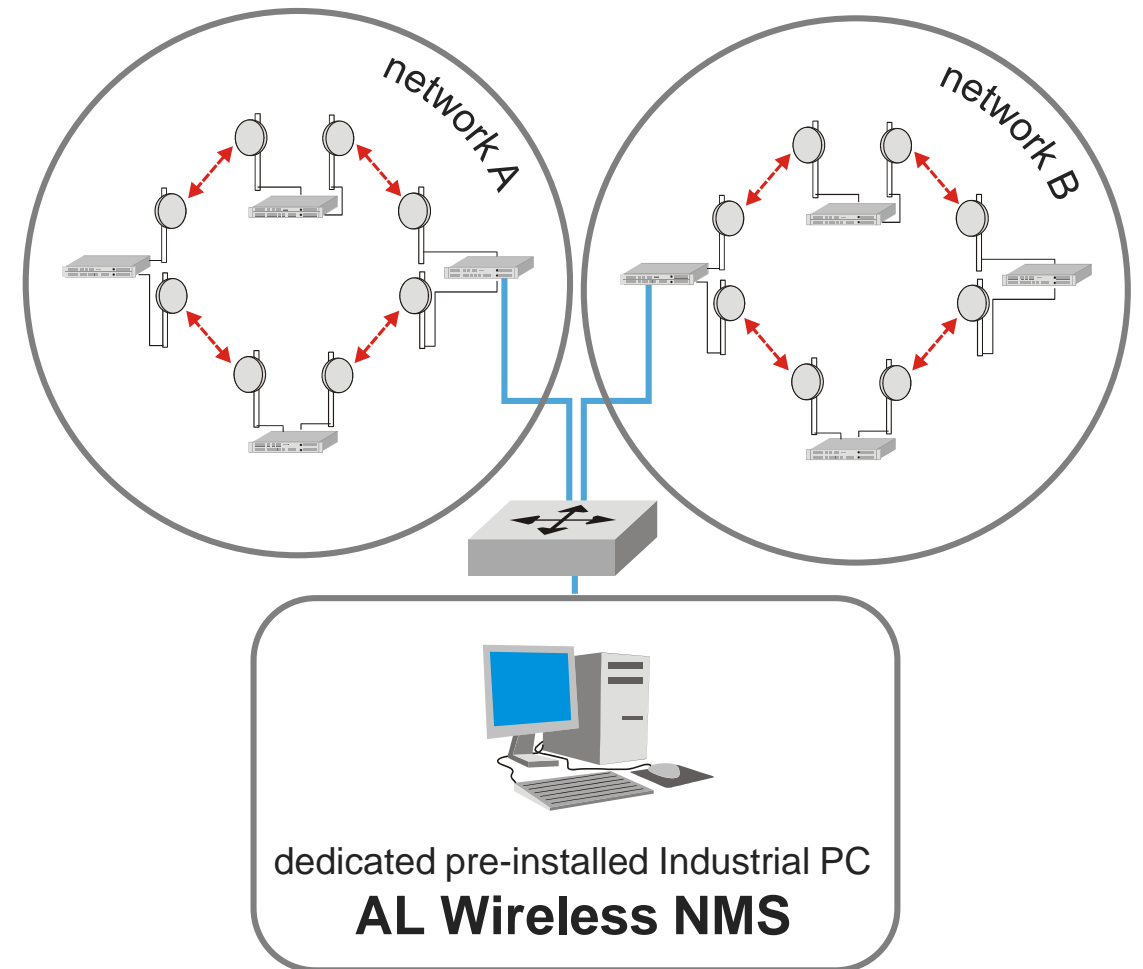

HIGHLIGHTS

AL Wireless NMS (Network Management System)

Key Benefits – Turn-Key Solution

- Unified solution – lower equipment costs
- Easy system deployment and connectivity
- Reduces implementation processes
- Guaranteed suitability of the dedicated Industrial PC – less malfunctions
- High-end tested performance
- Redundant and reliable solution
- Supports 3rd party devices – reduces the need for additional infrastructure
- Specially designed for RF links
- Simple and user friendly interface

Overview

Product

System Architecture

System Deployment

System Features

Full FCAPS Support

SNMP Support
(including SNMP traps)

Telnet, SSH and CLI
Support

Geographical and
topology map of the
network devices

Simple deployment and
connectivity via Ethernet

Support for 3rd party
devices

Automatic alarms and
notifications

Intuitive user interface
and system control

User access levels
and security

NMS Functions

Device Searcher & Manager

- Automatic discovery of network devices
- Pre-define the configurations for the devices

Support for 3rd Party Devices

- Possibility to integrate 3rd party MIBs
- Personalized and independent configuration of rules and automations

Maps View

- Geographical and topology map of the network
- Monitoring and management of all devices via the relevant map
- Easily add quick-action buttons and graphs

NMS Functions

Alarms and Notifications

- Automated alarms and notifications display
- Accessible logs and history of outputs and actions
- Active notifications enabled by SNMP traps

Trends & Stats

- Displays statistics and changes to the device information
- Different visualization options
- Comparison of data, including function approximation

Remote Monitoring

- Network supervisors and technicians can manage and monitor the network via the PC-client
- Notifications can be received via web application (compatible with mobile), email, text message

NMS Service

We provide services to our clients using the AL Wireless NMS.

These include support during network deployment and network optimization, and better long-term support and technical assistance.

The long-term support to clients and their networks includes advanced troubleshooting and is performed by analysing the issue and relevant data supplied by the client using the AL Wireless NMS.
